

Accord Lock

PRODUCT WORKSPACE + DEALTRACE PUBLIC PROOF / GWDC CHALLENGE B

The agreement decides what gets paid.

For research teams buying quarterly CAPEX table work.
Agree on the work. Check the bill. Keep the evidence.

Seller bills

25.00

DEMO

Still under budget. Still rejected by the chain.

Real Kiln / Qwen calls formed the deal. Both agents signed it.
Sepolia rejected the inflated, genuinely signed bill and paid 20.00.

1

Negotiate the work

Three provider agents offer terms. The buyer counters. Every final term links to its original signed message.

2

Try it, then inspect the public proof

Accord Lock offers a guided private-EVM demo. DealTrace supplies the recorded Kiln / Sepolia proof of agreement-bound payment.

3

Carry the evidence out

Export one receipt. Recompute the work, verify both signatures, and check the exact chain calls without the app database.

5 live Kiln calls / 5 Sepolia transactions / 47 finalized checks

209 automated tests pass. Five real model calls used 7,890 tokens.

A testnet prototype with explicit limits

The browser demo uses authored rules and test units. Public proof uses actual Kiln calls and Sepolia, with trusted delivery evaluation. No independent customers, human-study results or NPU power measurements are claimed.
